## York-Shipley Global Division of AESYS

**Technologies, LLC**, is one of the world's largest manufacturers of packaged fire-tube boilers, with output capacities of up to 2,000 BHP/70,000 PPH/30 tons and available to 400 PSIG/36 Bar/37 Kg/Cm\_steam pressure. As the most trusted name in the boiler industry, Y-SG provides one of the largest lines of boilers and ancillary boiler room equipment to meet the most stringent and current environmental mandates, as well as applicable codes, standards, and specification requirements. Y-SG's products are Installed and operating in commercial and industrial applications in more than 60 countries worldwide.

Y-SG products have been installed in Colombia for more than 30 years. Exports to the region currently account for approximately 5% of gross sales. Kevin J. Hoey, president and CEO, says eliminating trade restrictions will accommodate further growth in this region. He adds, **"Local import tariff reduction, together with elimination of other trade restrictions, will directly reduce end-user costs for boilers and related equipment. This will afford increased opportunities to participate in markets where demand for Y-SG products is evident."**
