Since 1963, **Wagman Metal Products, Inc.**, has been a leading supplier of power trowel replacement blades and floating pans in the concrete industry.

Wagman Metal Products is a family business, which started when company founders George F. Wagman Sr., and his son, George F. Wagman Jr., began production and distribution of a variety of blades to fit many brands of power trowels. The company manufactures more than 250 different blades to fit the trowels of more than 40 companies.

Wagman's experience and innovation have helped pioneer the development of heavy-duty blades to cope with the stresses of the new generation of heavy riding trowels. More recently, the company moved production to a new 63,000-square-foot facility in York, Pennsylvania, to better serve its customers.

As the Wagman product line has grown, so has its distribution. Today, the company's line is available from more than 3,000 contractor supply distributors worldwide.

“Free trade agreements make it much easier to compete internationally. We currently do business in more than 15 countries and are always looking for ways to expand our sales,” says Jeff Snyder, sales manager.
